

PROMIS 4.16 Training

[PD Assist](#)

Background:

The PD assist module is used to capture and view information related to any help required by PD patients. This is for patients that require long-term or short-term PD care at home.

As part of the 4.16 release, the PD assist module will now have a new section added to it. This section is the “Assistance Required” section. This section allows a user to record and view any information related to the different types of assistance required for PD patients at home.

Navigation:

PROMIS 4 > Patient Overview > Renal > PD > PD Assist

Functionality:

The Assistance Required section has the following fields as shown:

PD Assist
