

PROMIS 4.17 Training

[Transplant Program Vaccination Report](#)

Background:

The provincial clinical guidelines for vaccination in pre-transplant patients have been updated. The guidelines outline the vaccines that are either required or recommended for pre-transplant patients. These guidelines will affect new patients being assessed for transplant, as well as patients who are already active on a transplant waitlist.

BC Transplant has an updated list of required and recommended vaccines by different Programs. The need is to find out which patients are missing vaccines. In this release, we will create a report to identify these patients by program and status.

Navigation:

PROMIS 4 > Patient Lists > Transplant Vaccination Status

Functionality:

The parameters required to generate the list are: *Program, Status, Primary Transplant Centre* and *Regional Transplant Centre*.

Once the parameters are selected, click on *Run* to generate the list.

The generated list will show all patients corresponding to the program, status and management centres selected with missing vaccines. The fields included in the list are: *Last Name, First Name, DOB, PHN, Missing Required Vaccines* and *Missing Recommended Vaccines*. This list could also be exported into an Excel sheet. The Missing Required and Missing Recommended vaccines are obtained from the *Pt. Infectious Status/Immunization Hx* module.

Transplant Vaccination Status

* Program Transplant: Kidney * Status Pre Transplant * Primary Transplant Centre Vancouver Hospital And H.S.C. * Regional Transplant Centre Vancouver Hospital And H.S.C.

dd-mmm-yyyy

LAST NAME	FIRST NAME	DOB	PHN	MISSING REQUIRED	MISSING RECOMMENDED
ALI	PIROSKA	22-Nov-1962		Covid-19, IPV	
ALI	YUSUF	16-Oct-1963		Covid-19, IPV	
ALI	ZHEN	30-Jul-1992		Covid-19, IPV	IPV
ANDERSON	KARSTEN	26-Feb-1960		Covid-19, IPV	

Mapped Vaccines & Unmapped Vaccines:

Mapped Vaccines are vaccine names that are mapped to a vaccine code. This will help to identify if the patient is missing any particular vaccine and the type of vaccine that's missing.

Unmapped Vaccines are vaccine codes that are currently not mapped/associated to any vaccine name.

To generate a list of mapped or unmapped vaccines, you can click on the corresponding buttons for each.
