

## PROMIS 4.20 Training

### Modality Selection Enhancements: Independent Dialysis Referral

#### *Background:*

The Modality Selection module will now have a section to capture a patient's referrals for Independent Dialysis. A referral is submitted to the home therapy program after the patient expresses interest in learning more/pursuing a modality and has made a dialysis decision.

#### *Navigation:*

PROMIS 4 > Patient Overview > Renal > Modality Selection

#### *Functionality:*

- Any referrals for independent dialysis are captured in the *Independent Dialysis* section in Modality Selection.
- A record could only be captured in this section (the plus sign becomes enabled) if the patient has a dialysis decision of Home Hemodialysis or Peritoneal Dialysis.
- Referrals can only be viewed on the EDIT page by selecting the independent dialysis decision associated with it in the '*Patient Dialysis Decision*' table.
- If a user tries to delete a Dialysis Decision for any independent therapies, a message pops up informing the user that any related referrals for independent therapies will be deleted as well.
- On the summary page, a referral will only display if the *latest* dialysis decision is an independent therapy AND there is a referral associated with it.

<b>Independent Dialysis Referral</b>	PD assisted
<b>Independent Dialysis Referral Date</b>	01-Apr-2023
<b>Notes</b>	Assisted PD is recommended
