

PROMIS 4.21 Training

Donor Immunology

Background:

All Donor modules will be moved into PROMIS 4 in this upcoming release including the Immunology module.

Navigation:

PROMIS 4 > Donor Overview > Results > Immunology

PROMIS 4 > Donor Overview > Results > Immunology > Immunology Report

Functionality:

The Immunology screen will be the same for both living and deceased donors.

The *ABO* section of the Immunology screen is a read-only section where information is displayed either from the *Donor Registration* screen or comes in via interface.

The *Case Reports* section displays read-only information from interface.

In the *HLA* section data could either be entered manually or via interface.

A trigger is sent to CBS when a value of “Yes” or “No” is entered in the *HLA Typing Confirmed* field.

All HLA information is required for allocation and must be entered in pairs (except for *DRB 3*, *DRB4* and *DRB5*).

The *Donor Overview* screen will display the most recent immunology data.
